

Use your Data  
To make informed decisions

## Intuitive, Automated, Intelligence

“Given the amount of data available within a business, it would be a mistake not to use it all wisely. The reality is, data resides in many places, in different languages and not intelligently connected in any way. Solutions are needed which are intuitive and automated so that your valuable time is spent on making important decisions instead of trying to interpret complex data ”

*UCentric Data Analytics is able to import data from all types of sources, transform that data by blending it all together, applying rule sets and exception reporting and presenting the results in dashboards of real intelligence so that informed decisions can be made. UCentric is also able to blend together data with loose connections using its NORA engine so that influences between data can be identified when previously they weren't able to. Valuable working time is then maximised and you are only interrupted in your daily work by exception*

## Benefits of UCentric Analytics

MIT operate an agile approach to both professional services and our product development. UCentric is designed with agility in-mind allowing for insightful, efficient and agile data capture, analysis and delivery Process.

***“UCentric will capture complex data and make sense of it all making sure that your time is best spent on making real decisions for positive business impacts. Let UCentric do the work!”***

- **Intuitive** in terms of taking data from any source, in any language and in any format, blend that data together and make direct or loose connections between non obvious data sources, the application of rule settings and alarm management assists with exception based reporting
- **Automated** and scheduled data capture and data blending, easy to use interfaces, point and click, a repeatable solution
- **Informed decisions** are then much easier to make as the results are presented on dashboards and an easy to use web interface. Trend analysis then proves action taking and allows prediction analysis

# Discovery

UCENTRIC HAS DECODERS FOR ALL MAJOR VOICE, DATA AND IOT VENDORS

**UCentric** is designed from the ground-up to contact and consume data from multiple sources, including; IP, SNMP, Serial, Database, SysLogs, File dumps and more.

Knowledge of the data sources is unnecessary as the UCentric platform visualizes everything. All data is normalized to ensure standardized formats regardless of sources so that comparisons and connections with disparate data can provide additional intelligence

# Transformation

HAVING AN IN DEPTH UNDERSTANDING OF YOUR NEEDS AND GOALS IS A FUNDAMENTAL MODEL IN THE WAY WE WORK WITH YOU

By transforming and normalising the data into a SQL database, **UCentric** can perform complex modelling and comparisons on data in order to highlight issues and produce insights for the business.

Highlighting potential issues, rule setting and exception based reporting all help to automate the process which in turn creates more time to spend on making important decisions.

# Informed decisions

UCENTRIC PUTS YOU FRONT AND CENTRE IN THE POSITION OF MAKING INFORMED DECISIONS MUCH EARLIER AT THE START OF AN INVESTIGATION AND NOT WHEN ITS TOO LATE

Using a number of techniques, **UCentric** can correlate data and visualise it in a number of ways, including ;

- 3D building models
- Network graphs
- Interactive charts and graphs

**“UCentric unlocks vital Insights from your data - data on your own network that could be working much harder to influence your business strategies and enhance operations”**
