UCentric Migration Accelerator

From legacy complexity to cloud-ready voice. Fast, clean, predictable.

Start Strong. Migrate with Confidence.

Voice migration projects are rarely simple. Multiple vendors, inconsistent data and manual processes often create risk before the project has even begun. Most organisations are not lacking tools. They are lacking structure, consistency and clean data.

Common challenges include:

- Fragmented data across multiple PBX and UC systems
- Manual extraction and validation processes prone to error
- Heavy reliance on specialist resource for repetitive tasks
- Delays caused by rework, validation issues, and provisioning errors

The UCentric Migration Accelerator is designed to remove that friction. The result?

A Structured, End-to-End Migration Engine

The UCentric Migration Accelerator addresses migration complexity through three core phases:

Discover & Extract	Transform & Validate	Provision & Deliver
Automated multi-vendor auditing of legacy and cloud voice environments, using natural language AI to interrogate results.	Data normalisation into a targeted, usable, intelligently mapped format. LLD validation to eliminate provisioning blockers early.	Bulk provisioning into cloud platforms. API-driven automation for accuracy, speed and integration into existing business operations.

This approach ensures migrations are predictable, scalable, and controlled from start to finish.

Migration Accelerator in Practice

Faster Delivery, Reduced Effort

- Automated extraction and orchestration removes manual overhead
- Projects delivered in minutes, not months
- Re-runnable processes keep data aligned throughout the project

Accuracy Built In

- Consistent data handling across all vendors and environments
- Pre-provisioning validation reduces downstream errors
- Early identification of compatibility issues

Reduced Risk

- Structured, repeatable process eliminates variability
- Continuous auditing removes the need for disruptive change freezes
- Fewer post-migration issues and support tickets

Operational Efficiency

- Frees up skilled resource from manual tasks
- Enables focus on planning, validation, and client engagement
- Supports high-volume migrations without scaling headcount

Commercial Impact

- Faster time to value and reduced project cost
- Improved "time to cash" through accelerated delivery
- Scalable model for partners and service providers

Better Data, Better Decisions

- Clean, validated data for stakeholder alignment
- Visibility into usage, licensing, and optimisation opportunities
- AI-powered natural language queries on audit outputs

Built for Multi-Vendor, Real-World Environments

- Supports Cisco, Mitel, Avaya, Nortel, Zoom, RingCentral, Microsoft Teams, Netsapiens, Unify, NEC, Alcatel, Asterisk and more
- Integrates via API into partner and customer environments
- Outputs directly into client-specific provisioning templates

About MIT

MIT is a UK based software and services company:

- 35+ years of experience in voice and UC
- Multi-vendor expertise across legacy and cloud platforms
- Proven delivery across over 1 million migrated users

MIT combines software and professional services to act as a delivery partner, not just a tool provider. We help organisations move from fragmented voice estates to fully optimised UC environments.

Accelerate your migration. Reduce your risk. Deliver with confidence.
